

Explanation

- . European Roulette use numbers from 0 to 36 inclusive.
- . Chose a Fair Roulette Site and Play
 - Fair Roulette Site should be a trust web site that you can withdraw your money.
 - Fair Roulette Play should be in general a Live Roulette and not a programmable one that the Casino can play with the results.

. Use of the program:

At the beginning of the <body> of the HTML file, there are the following constants in JavaScript:

```
const standardMode = true;
```

```
const isDoubleZero = false;
```

The program consists from 3 parts:

- The Top part show the "KEYBOARD BUTTONS"

In case of European Roulette: (const isDoubleZero = false ;)

0					
1	2	3	4	5	6
7	8	9	10	11	12
13	14	15	16	17	18
19	20	21	22	23	24
25	26	27	28	29	30
31	32	33	34	35	36

In case of American Roulette: (const isDoubleZero = true ;)

A grid representing the American Roulette layout. It consists of 38 numbered pockets arranged in 7 rows. The first row contains two green pockets labeled '0' and '00'. The subsequent six rows each contain six pockets, alternating between red and black numbers. The numbers 1 through 36 are arranged in a standard roulette pattern: 1, 2, 3, 4, 5, 6 in the second row; 7, 8, 9, 10, 11, 12 in the third; 13, 14, 15, 16, 17, 18 in the fourth; 19, 20, 21, 22, 23, 24 in the fifth; 25, 26, 27, 28, 29, 30 in the sixth; and 31, 32, 33, 34, 35, 36 in the seventh. Red numbers are 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35. Black numbers are 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36.

0	00				
1	2	3	4	5	6
7	8	9	10	11	12
13	14	15	16	17	18
19	20	21	22	23	24
25	26	27	28	29	30
31	32	33	34	35	36

This is the “KEYBOARD BUTTONS” panel to press when a spin comes out.

It shows **WIN** when there is a win.

This is the “BACK BUTTON” to press when by error a mistaken button is pressed, it cancels it.

Every time the back button is pressed, it erases the last number entered to adjust an error.

The “RESET BUTTON” used to restart a new game.

Definitions:

SN: Single Numbers are numbers that appear only one time in the last 37 spins.

FSN: First Single Numbers is the first number that appear only one time in the last 37 spins.

MN: Multiple Numbers are numbers that appear 2 or more times in the last 37 spins,

- The Middle Part show the "PLAY AREA"

This is the "PLAY AREA" panel that show the numbers to play.

In case of (const standardMode = false;) there are 3 types of background's color:

First Single Number always represented by a yellow background

Numbers never appear before in the previous 37 numbers since the first Real Play start are represented by a dark background

Numbers that appear before in the previous 37 numbers since the first Real Play start and became again unique are represented by a light background

Before the REAL PLAY start. The PLAY AREA show 1 number to play.

This is the probability before REAL PLAY start. So you play one number and the probability of this number to come is 85% till REAL PLAY start.

A REAL PLAY start when the system shows multiple numbers to play.

This is the probability of the next spin to be one of the played numbers.

- The Last Part show the "PREVIOUS NUMBERS"

Case of (const standardMode = true;)

This is the "PREVIOUS BUTTONS" panel that show previous numbers entered to check if they are correct

Case of (const standardMode = false;)

Case of (const isDoubleZero = false ;)

Case of (const isDoubleZero = true ;)

PREVIOUS NUMBERS

							0

Previous numbers are divided into 2 categories:

SN: Single Numbers are numbers that appear only one time in the last 37 spins and it is represented by a dark background

MN: Multiple Numbers are numbers that appear 2 or more times in the last 37 spins and it is represented by a light background

This is the counter of Play Numbers or Previous Numbers.:

When the program start, the system show the First Single Number to play in the last 37 numbers. This number has the probability to come 85% of cases (mean that it come 85% of the cases before the Real Play start).

When a Real Play start, the system show the probability of the next spin to come.

Ways to play:

There is 2 ways to play

- Play always the First Single Number (the only number shown on the “Play Area”) and when it came (should be 85% of cases), restart the play.

Because we bet b on a single number if it come after n spins but before 36 spins we win $((36-n)*b)$ \$. If it come on the 36 spin we are even. If it come on the 37 spin, we lose b and in this case Real Play start and the probability will be on the next spin. We continue with Real Play until we get a profit and restart again.

- Continue to play like before, if the First Single Number came, lower your bet till the Real Play Start and we continue choosing our bets depending on the probability of the next spin until we reach our goal

Important notice:

- Your deposit should cover at least 100 times the value of the bet. For example, if you planning to bet 1\$, you should have deposited at least 100 dollars.

- Follow the percentage shown in the progress bar. Don't bet maximum until you find at least 90%.

- Be patient, never play from your head.

- On iPhone will not work directly on safari or chrome. A 3rd party HTML VIEWER should be installed.

- On android should work normally after download of the file.

- A lost is considered when we get 3 consecutive fails; because if the same bet is applied on the numbers to play (less or equal to 17) for two rounds we still win. On the third round we double the amount to bet.

BET UNIT	BET VALUES	WIN	LOST
Round 1: (numbers to play in general are less than 15 rarely go 16 or 17)			
1	15	21	15
Round 2: (Lost on Round 1)			
1	15	6	30
Round 3: (Lost on Round 1 and Round 2)			
2	30	12	60
Round 4: (Lost on Round 1, Round 2 and Round 3)			
3	45	3	105
Round 5: (Lost on Round 1, Round 2, Round 3 and Round 4)			
5.5	82.5	10.5	187.5
Round 6: (Lost on Round 1, Round 2, Round 3, Round 4 and Round 5)			
9	135	1.5	NA

Should not go more than 6 rounds.

85% of cases there is WIN till Round 3.
